Course Code: CSA1522

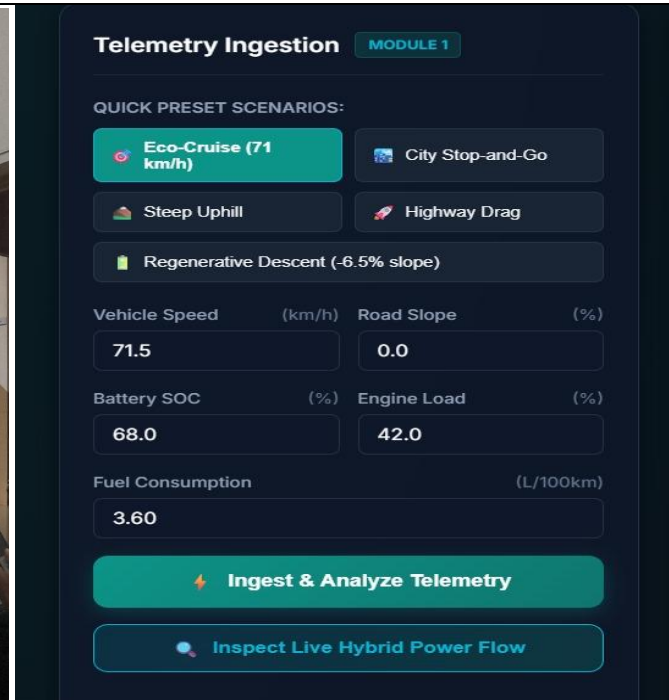

Slot: C

Course Name: Cloud Computing & Big Data Analytics

Course Faculty: Dr.Rajaram. P

Project Title: Cloud-Enabled Fuel Consumption Analysis and Energy Efficiency Optimization for Hybrid Vehicles

Module Photographs:

Project Description:

Cloud-Enabled Fuel Consumption Analysis and Energy Efficiency Optimization for Hybrid Vehicles is a smart vehicle monitoring and analytics system designed to analyze fuel consumption and energy usage in hybrid vehicles. The system collects real-time vehicle parameters such as fuel level, fuel consumption, battery state of charge, speed, distance traveled, engine performance, motor performance, temperature, and driving conditions using vehicle sensors.

The collected data is transmitted to a cloud platform, where it is stored, processed, and analyzed to identify fuel and energy consumption patterns. The system provides useful insights into fuel efficiency, battery utilization, driving behavior, and overall vehicle performance.

Using data analysis and optimization techniques, the proposed system can identify inefficient operating conditions and provide recommendations for improving energy usage
